

## ezForecaster™ for Excel®

Designed for anyone who needs to create business forecasts, ezForecaster is a powerful, yet remarkably easy-to-use time series forecasting add-in for Microsoft® Excel®. ezForecaster can automatically choose the most appropriate forecasting method using a wide variety of time series techniques, but also allows you to select a method manually. For power users, ezForecaster also offers a Multiple Regression wizard to enable you to determine (and at the same time, forecast) the factors that influence your sales or demand. Best of all, ezForecaster works directly inside Excel, so there's no need for you to struggle to get your data into yet another separate application!

### Forecasting Has Never Been This Easy!

1. Select the Data Range
2. Choose the Method (better yet - choose Best Fit Method)
3. Choose 'Finish'

### Who Needs it?

Any professional who needs to create a forecast or projection – including those involved directly or indirectly with the forecasting function, from consumer packaged goods, pharmaceutical, telecommunications, chemical, energy, utility, insurance, banking and finance sectors.

### Key Features

- Two wizards: one for Forecasting, one for Multiple / Stepwise Regression
- 23 time series forecasting techniques from simple curve fitting to sophisticated seasonal smoothing routines
- Forecast multiple lines concurrently
- Works on any Microsoft Excel 97 - 2010 worksheet
- Incredible value; Single user license \$399
- 30-day Money Back Guarantee\*

### System Requirements

Windows XP, Vista or 7. Microsoft Excel 97 – 2010. 5 MB hard disk space.
